TURF SERVICES

GHG
The turf experts

PLAY GREENER

Healthy turf, healthy communities

WHAT WE DO

GHG are your 'green' partner, and offers experience, proven capabilities and a specialised team that deliver outstanding results.

We offer a complete range of turf related services to restore your turf surface and get you ready for play. Our turf and specialised equipment will create amazing green spaces for everyone to enjoy.

Our workplace practices and procedures adhere to Australian Safety Standards.

We take pride in our green spaces, and love to share our expert knowledge across government, commercial and elite-level sport landscapes. Request a free on-site consultation and quote.

DECOMPACTION & AERATION

Soil constantly gets compacted under foot traffic, which leads to slow growth, pooling of water and bare patches. Aeration is essential to allow nutrients, oxygen, and water back into the soil to reach the rootzone and allow optimum growth.

TOPDRESSING

Eliminates trip hazards and gives a smooth playing surface. Topdressing also promotes lush growth giving new life to turf.

WEED, PEST CONTROL & FERTILISING

Broad acre spraying provides full coverage of weed & pest control or fertilising. GHG can identify, diagnose and treat for any pests or weeds such as Lawn Grubs, Bindi and Clover. We can also diagnose plant nutrient issues and fertilise accordingly.

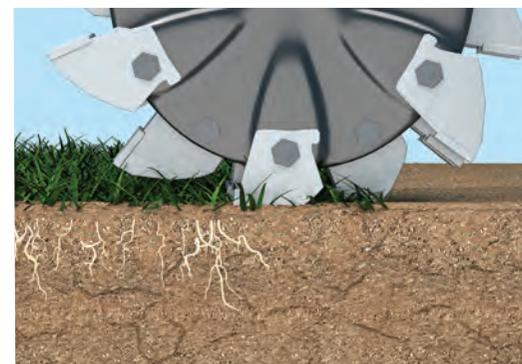

RETURFING

We supply and install a variety of locally grown turf for small projects all the way through to resurfacing entire sports fields and parklands.

SURFACE PREPARATION

We have many ways of resurfacing fields. From shaving off the existing turf surface for a quick returf to transforming the entire surface, releveling and returfing for a completely new field.

SCARIFICATION

Cutting into the thatch layer to remove old dead organic matter within the thatch layer will improve water permeability and gas exchange in the turf surface.
